

Connect Keap To Your WordPress Website

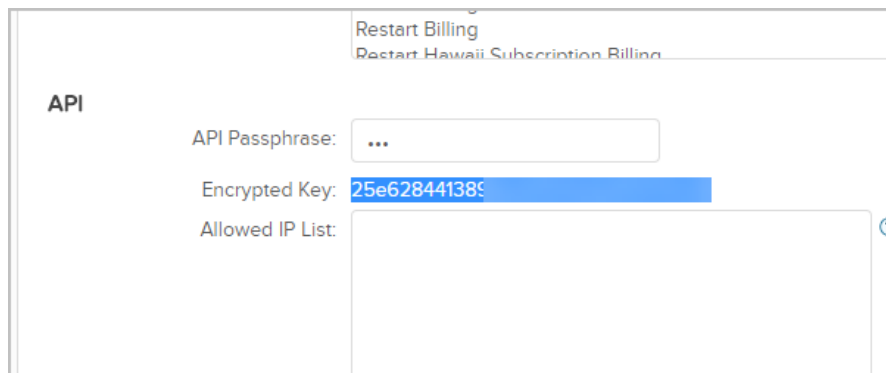

This article applies to:

Important Note! You can only connect your Keap account to one WordPress website. Connecting it to multiple sites will result in new contact records not being created! The plug-in also does support multi-site installations of WordPress as this is one installation of the plugin.

In the **Email Accounts** sidebar tab, you can connect your Keap Account to your WordPress Site. You can also:

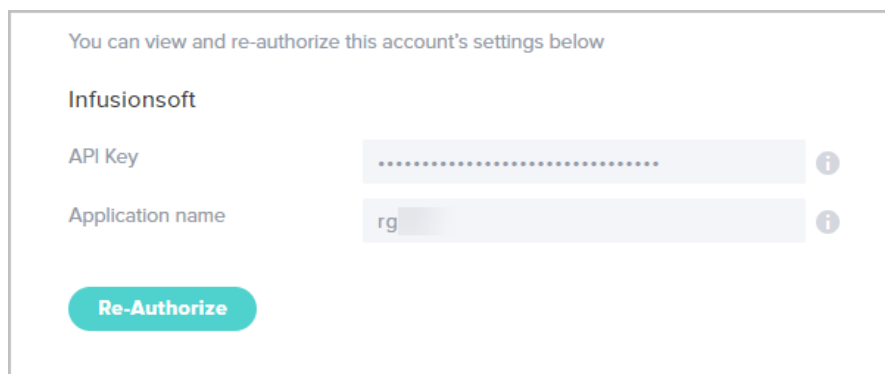

- Initialize a connection to their Keap account (on first visit)
- View the status of the connection to their Keap account
- Deactivate the existing connection to their Keap account

1. Grab your [API key](#) inside of your Keap application.
2. Copy your 32-digit encrypted API key

The screenshot shows the 'API' settings section in Keap. It includes fields for 'API Passphrase' (masked with '...'), 'Encrypted Key' (highlighted in blue with the value '25e628441389'), and 'Allowed IP List'. There are also links for 'Restart Billing' and 'Restart Hawaii Subscription Billing' at the top.

3. Paste this key value into the **API Key** field within the WordPress plugin:
Infusionsoft > Settings

The screenshot shows the 'Infusionsoft' settings in a WordPress plugin. It includes fields for 'API Key' (masked with dots) and 'Application name' (filled with 'rg'). There is a 'Re-Authorize' button at the bottom. The text above the fields says 'You can view and re-authorize this account's settings below'.

4. Enter your application name. For example, if your application URL is *abc123.infusionsoft.com*, then *abc123* is your application name

You can view and re-authorize this account's settings below

Infusionsoft

API Key ⓘ

Application name ⓘ

[Re-Authorize](#)

5. Click the **Authorize** button
 6. Click the **Save & Exit** button
