Campaigns update: Enhanced dashboard design

It's easier to see how your campaigns are performing. Immediately see how many contacts are active in a campaign, and see important stats like opens and clicks. You can also find activate the most popular templates with a cleaned up view. [Learn more.](#)

Mobile responsive web forms

With the latest update, Web Forms are now responsive. That means you can share it with confidence, knowing that no matter the device or platform, your visitors will see your page as intended. [Learn more.](#)

Bug Fixes

- Drop down menu items didn't display in alphabetical order.
- Users couldn't view previously completed imports.
- The Email Open goal in Campaign Builder wasn't triggered until the campaign was published a second time.
- Email previews within Keap displayed a button labeled "undefined" which didn't appear in the sent version of the email.
- Some subscription product orders were created with null products instead of the correct product when a large number of contacts triggered the Create Order goal simultaneously.
