## Spring Cleaning

The team maintained its commitment to quality this week with bug fixes across the board. We addressed some **merge field** issues, fixed some **tags** confusion, and cleared up an issue for Keap customers who previously used Infusionsoft.

## Bug Fixes

- Birthdays and anniversaries were displaying time information when merged into campaigns and broadcasts despite the fields not containing any associated time. ([Known Issue 1941197](#))
- If a subscription order in Infusionsoft does not have an end date and the app was toggled to Keap, the subscription status showed complete. ([Known Issue 1907721](#))
- When adding a tag to a contact with no name, the save button reads "Add tag to" instead of "Add tag".
