Advanced Email Builder: Spam checker improvements

We've improved the speed and reliability of our spam-checking tool while also adding more filters and logic that review your outgoing emails. If one of your emails looks like it could be flagged as spam, we'll give you tips on how to improve it before you send. Getting to the inbox as intended can be tricky, but this update will help position your emails for success. Learn more.

Keap Lite: Create Smart Forms to easily add contacts and information

Need to capture specific information when adding new contacts? Create an internal Smart Form to help you and your team gather important details that are specific to your business. You can also use these forms to add tags or notes to contacts. Learn more.

Bug fixes

- Emails created via the "New" button in the top banner of Keap failed to add attachments and displayed the error "Sorry, something went wrong. Please try again. Your file type may not be supported". (Known Issue 2090849)
