Filters for Analytics

With new filters in Analytics, Keap Max customers can learn more about your business with less effort. Find the data you need by filtering contact and email data by things like tags, campaigns and date ranges. Learn more.

Bug fixes

- The Set Field Value process in the Advanced Automation Builder could not be configured when any of the following custom field types were enabled: website, radio, user, user list box, or drill down. (Known Issue 2295847).
- Percent and currency custom fields are now created without any default value and act as empty fields. Previously, fields of this type would default to having a value of "0" when there wasn't a value applied.
