This article applies to:

Bug fixes

- Creating a custom drop down company field with a "<" or ">" symbol resulted in Keap displaying "<" or ">" instead of the symbol.
 - Some customers were unable to remove calendar integrations from Keap.
 - Advanced Automations containing unpublished sequences placed after decision diamonds queued contacts in the unpublished sequence immediately instead of waiting for the sequence to be published before queueing contacts.
 - Text-only email broadcasts were sent without email signatures when the option to include a signature was turned on.
-
