## Advanced Automations update: Update field values with basic math

Don't like math? Now Keap can help with the "Set Field Value" process, which can update your field values using addition, subtraction, division, or multiplication. For example, you may want to track a client's total number of purchases with the addition field, or subtract a field value after a product refund. There are so many options with this logic-based function. [Learn more.](#)

## Bug fixes

- Contact merge fields failed to properly merge in data when used in hyperlinks and buttons. ([Known Issue 2432655](#))
  - Some users were unable to save changes to contact records and received an error message stating, "Something went wrong and we couldn't save this contact's details. Please try again." ([Known Issue 2389801](#))
  - Adjusting the start date on a recurring invoice did not affect the invoice's subsequent charge dates.
-
