

February 3, 2022 | Keap®

This article applies to:

Improved information architecture and streamlined navigation

Welcome to the new and improved navigation. You'll notice different features are now grouped together to help with ease of use as well as with finding items related to one another. This redesign will enhance your overall experience with achieving value with Keap. [Learn more.](#)

2-step authentication

Increase the security of your account right from the login page with 2-Step Authentication. This process will allow you to confirm your identity and trust multiple browsers across multiple devices. [Learn more.](#)

Keap Marketing Number (KMN) settings expansion

Easily access your KMN settings anywhere you write marketing texts including Broadcasts, Easy Automations, and Advanced Automations. This allows you to interact with your number and billing information, manage your opt-in request message, and manage your auto reply message. [Learn more.](#)

Set default phone type when editing a contact

With the recent addition of marketing texts, it's more important than ever to have the most up to date phone numbers for your leads and clients. Now when you edit a contact, the phone type field will default to "Mobile" instead of defaulting to blank to help ensure your marketing texts are getting delivered to the right number. [Learn more.](#)

Bug fixes

- Custom domains that contain https:// would receive an error when trying to remove them from in Settings
 - When making edits to an existing Landing Page, the updates appeared inside the builder immediately but were delayed in the published version seen when viewing the hosted URL
-
