

Updating solutions in Solution Launchpad

Last modified on: 12/06/2024 9:50 am MST

1. Updating a bundle
2. Updating individual items

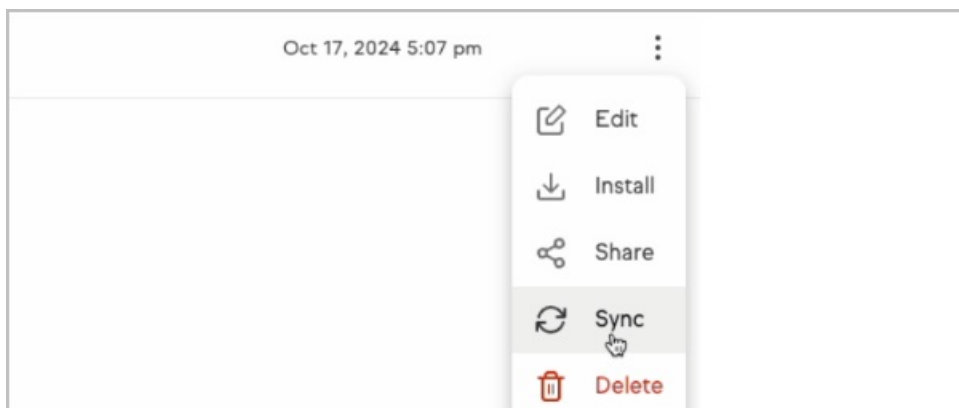

Even the most robust pre-built solutions need updates from time-to-time. Solution Launchpad makes it safe and convenient to update your items, only when you're ready to do so.

Simply login to your source application, and update your solution as needed. Rest assured your updates will remain local to your source app until you're ready to pull them into Solution Launchpad.

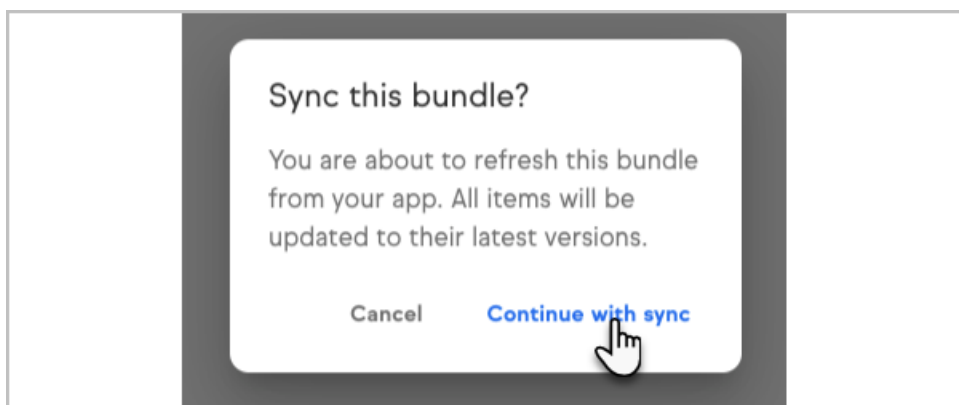

When you're ready to begin sharing the latest and greatest version of your solution, head over to Solution Launchpad where you'll find some convenient options to make this a breeze:

Updating a bundle

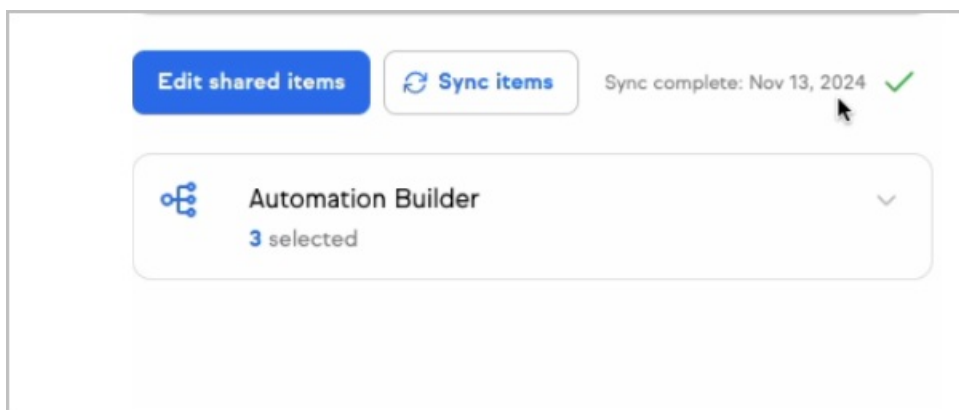

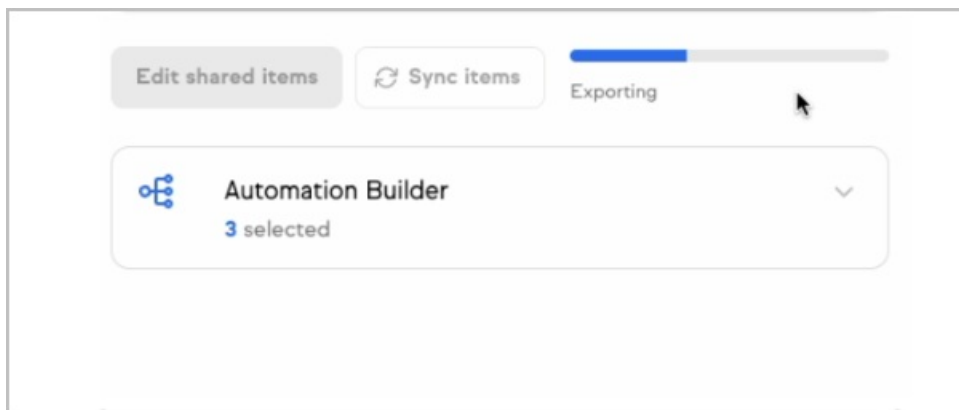

1. If you'd like to update all of the items in your bundle to their latest versions in your source app, simply click the actions menu next to your bundle, and click the sync option

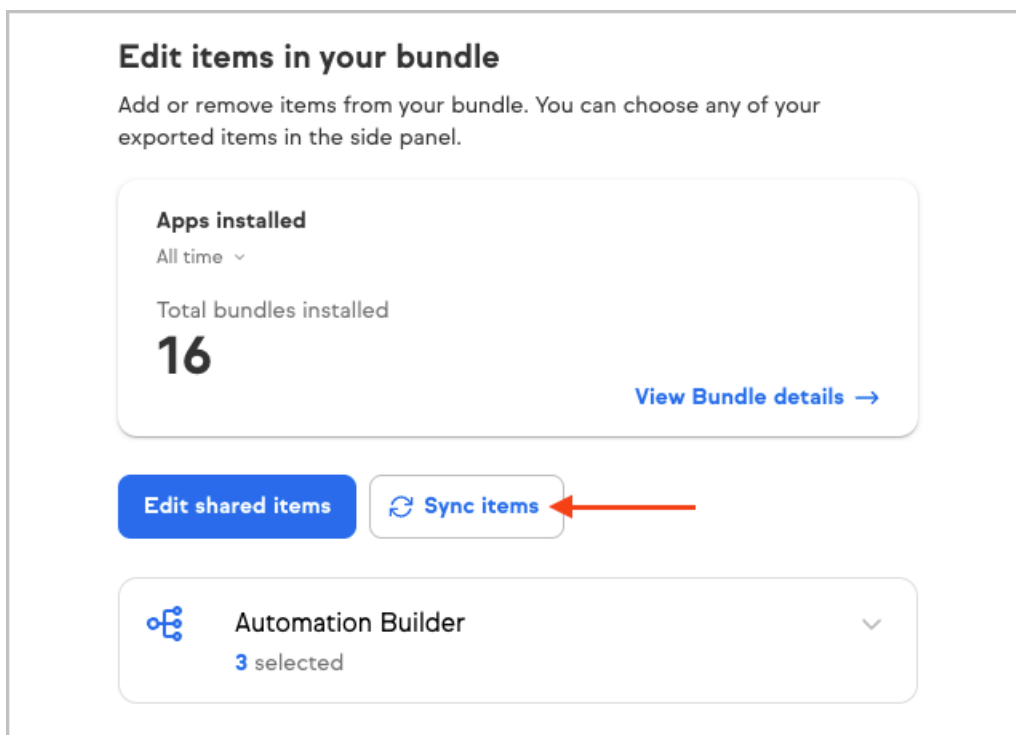

2. When prompted, confirm you'd like to import your latest updates to Solution Launchpad. Keep in mind, you will not be able to revert this update.

3. After confirming, you'll be taken to your bundle where you'll see the status of your update

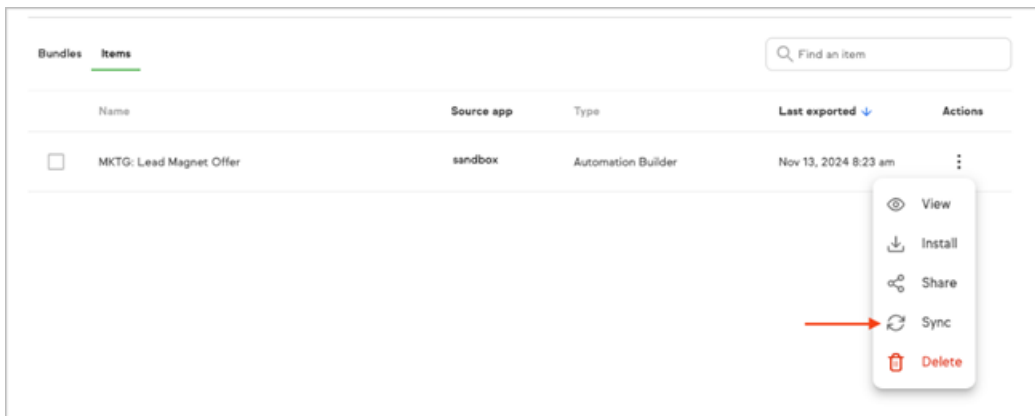

4. You can also use the sync option directly from the bundle summary screen

Updating individual items

You also have the flexibility to update individual items. Keep in mind, when you update an individual item it will also update that item in any bundles where it's used.

Bundles		Items			Find an item
	Name	Source app	Type	Last exported	Actions
☐	MKTG: Lead Magnet Offer	sandbox	Automation Builder	Nov 13, 2024 8:23 am	View Install Share Sync Delete

You can also sync the item from the summary page

Exported item

This item has been exported from your Keap app and is ready to be shared.
